

Workflow

Name:	10.01
Points:	4 pts
Deadline:	05/12
Prerequisite(s):	none

Main

1. Create a header file named **w1001.h** that defines an int *Node* pointer function named **Merge()** whose header is

```
Node<int>* Merge(Node<int>* a, Node<int>* b)
```

It returns a linked list that contains the sorted content of the linked lists pointed to by both *a* and *b*. If both *a* and *b* point to empty linked lists, the function returns null.
